Subclinical Atrial Fibrillation: Device Detected AF

Terminology: subclinical AF, atrial high-rate episodes

- As the technological advancement of cardiac implanted electronic device (CIED) enables the continuous detection of atrial activities, the asymptomatic atrial tachyarrhythmia can emerge as a relatively new entity and merit more considerations.
- These episodes are described as atrial high-rate episodes (AHRE) and are clinically asymptomatic, referred to subclinical AF (SCAF).
- They are clinically distinct from the ECG-documented paroxysmal AF due to the lower stroke rate, variability of different device detection and lacking of evidence-based approach to treatment.

Comparison among AHRE<6min, 6min-6hours, >6 hours

(A) AHREs > 6 hours

- AHREs burden = 2.3 (%)
- LAV_{max} = 55.01 (mL/m²)
- LAV_{min} = 38.85 (mL/m²)
- LA total EF = 29.36 (%)
- 4CH PALS = 8.25 (%)
- 4CH PACS = 1.62 (%)

Type	ID#	Date	Time h:mm	Duration h:mm:ss	Avg bpm AV	Max bpm AV	Activity at Onset
ATIAF	1984	01-Mar-2018	04:36	02:00	265/72	333/80	Rest
ATIAF	1983	23-Feb-2018	10:24	:34:53	276/90	500/118	Rest
ATIAF	1982	20-Feb-2018	08:51	02:01:15	305/91	400/130	Active
ATIAF	1981	11-Feb-2018	02:19	07:18:50	351/78	500/109	Rest

(B) 6 minutes < AHREs < 6 hours

- AHREs burden < 0.1 (%)
- LAV_{max} = 30.54 (mL/m²)
- LAV_{min} = 19.17 (mL/m²)
- LA total EF = 37.21 (%)
- 4CH PALS = 24.96 (%)
- 4CH PACS = 17.32 (%)

Type	ID#	Date	Time h:mm	Duration h:mm:ss	Avg bpm AV	Max bpm AV	Activity at Onset
ATIAF	6186	03-Aug-2017	06:58	:10:37	133/70	188/76	Rest

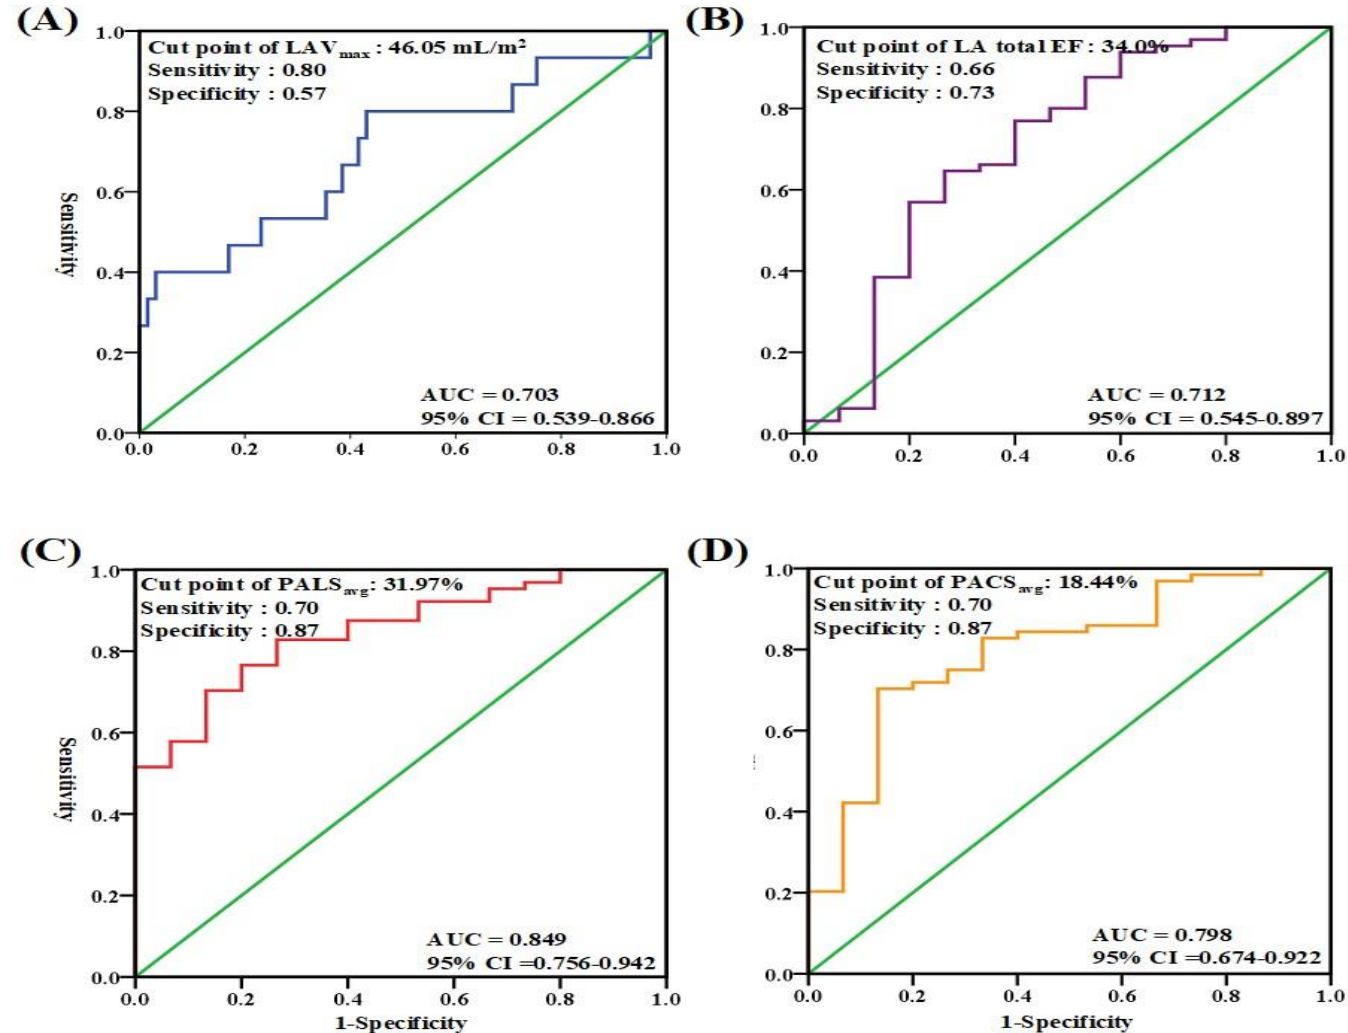

(C) AHREs < 6 minutes

- AHREs burden < 0.1 (%)
- LAV_{max} = 33.85 (mL/m²)
- LAV_{min} = 19.38 (mL/m²)
- LA total EF = 42.75 (%)
- 4CH PALS = 34.81 (%)
- 4CH PACS = 10.81 (%)

EGM	Date	Time	Peak A Rate	Duration (H:M:S)	Activity at Onset
	29 Jan 2019	05:18	187	00:00:08	Most Recent

The association of LAV, LAEF, PALS and PACS with AHRE > 6 hours

Conclusion: Functional remodeling of the atria manifested after AHRE >6 min. Increased biatrial volumes and decreased LA reservoir and pump function occurred when AHRE were > 6 h. These LA structural and functional may be considered surrogate imaging markers for stroke risk assessment in patients with CHA₂DS₂-VASc ≥ 2 and AHRE.

LA passive EF (%)	15.6 \pm 8.3	16.8 \pm 9.9	15.6 \pm 10.6	0.876
LA active EF (%)	29.9 \pm 7.5	26.4 \pm 9.7	18.9 \pm 10.3	<0.05
LAAV max (mL)	5.1 \pm 2.1	7.6 \pm 3.2	8.5 \pm 2.4	<0.05
LAAV min (mL)	2.4 \pm 1.1	3.6 \pm 1.8	4.2 \pm 1.8	<0.05
LAAV precontraction (mL)	4.6 \pm 1.7	6.3 \pm 2.5	6.6 \pm 2.5	0.097
LAA total EF (%)	58.7 \pm 11.4	51.3 \pm 14.4	45.9 \pm 9.6	<0.05
LAA passive EF (%)	20.7 \pm 13.3	15.7 \pm 7.6	20.6 \pm 10.9	0.083
LAA active EF (%)	44.8 \pm 10.7	43.1 \pm 16.4	37.1 \pm 13.7	0.515
HU ratio of LAA/AA	0.97 \pm 0.05	0.98 \pm 0.03	0.91 \pm 0.18	<0.05
Total EAT (cm ³)	25.0 \pm 11.8	26.2 \pm 8.5	20.7 \pm 9.2	0.084
LVEF (%)	59.0 \pm 12.9	54.0 \pm 13.6	53.0 \pm 9.5	0.707

LA and LAA EF and active EF were related to future development of AHRE longer than 6 minutes

Multivariate analysis Results

BRITISH
PHARMACOLOGICAL
SOCIETY

	Univariate			Multivariate		
	OR	95% CI	P	OR	95% CI	P
LAV min	1.06	1.02-1.10	<0.01	1.02	0.92-1.08	0.572
LAV precontraction	1.04	1.01-1.08	<0.05	-	-	-
LA total EF	0.90	0.84-0.97	<0.01	0.91	0.81-1.01	0.068
LAA total EF	0.96	0.93-1.00	<0.05	0.97	0.93-1.01	0.161
LAA passive EF	0.99	0.98-1.10	0.130	-	-	-
LAA active EF	0.98	0.95-1.01	0.258	-	-	-
HU ratio of LAA/AA	0.86	0.75-0.98	<0.05	0.91	0.79-1.02	<0.05
Total EAT	0.94	0.86-0.98	<0.05	0.94	0.90-1.03	0.267

HU ratio of LAA/AA could predict subsequent AHRE > 6 mins

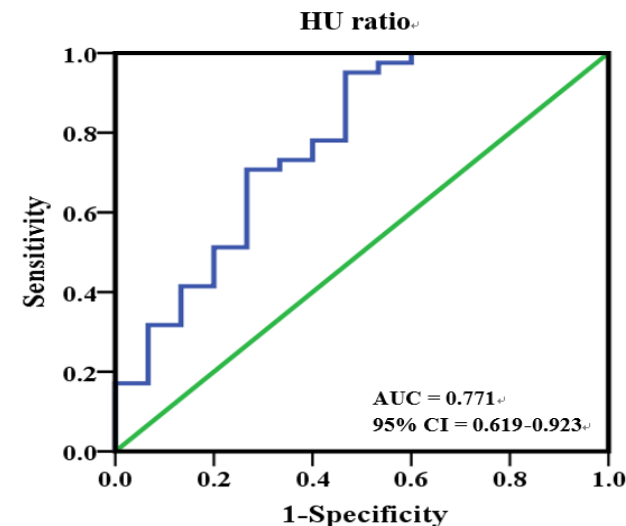

1-cm² ROI was sampled within the LAA to show the lowest HU values and inside the filling defect, if it existed.

At the same level, another 1-cm² region was selected in the contrast-enhanced lumen of the ascending aorta

A cutoff point of 0.93 was determined with a 95% sensitivity and 47% specificity.

Conclusions

- Subclinical AF defined as AHRE > 6 minutes showed a more favorable remodeling of LA structure and function (compared with clinical AF), which might correlate to the burden of AHRE
- Echocardiography and cardiac CT can delineate the changes of a trial substrate and provide an incremental value to justify the appropriate treatment.
- HU ratio of LAA/AA can serve as a reliable parameter to predict the occurrence of AHRE > 6 minutes and prompt the use of anticoagulant in the high risk patients.

V	V	V	V	73.63%	68.84%	89.83%	77.93%	0.841

Conclusion

- With incremental characters identification, RF and EM achieved the AUROC scores of 0.84-0.85
- The best accuracy of the AHRE sustainability was 78% by Random Forest ML-model
- We presented a ML-enabled IEGM model for predicting AHRE sustainability in the future in CIEDs based on the early IEGM segment, that may further develop an alarm system to prevent SCAF associated with major cardiovascular events.
